

WANTED: CYBERSECURITY INTERN

With supervision, gain the appropriate level of knowledge to work collaboratively with Forge clients to help them prepare for NIST 800-171 compliance and CMMC certification including scoping, risk assessment, maturity assessment of current controls, risk/gap remediation plan development, remediation plan, execution, System Security Plan Development, etc.

LOCATION: Morgantown, WV

ESSENTIAL FUNCTIONS / KEY AREAS OF RESPONSIBILITY

- Gain familiarity with assessing current DFARS NIST 800-171 controls compliance status and identifying the gaps and remediation plans.
- Participate in efforts to implement secure solutions for clients that need to be compliant with DFARS requirements; specifically CMMC and CISSP.
- Build working knowledge of, and deliver, with supervision, security enhancement activities to protect computer systems, networks, and data. This includes gaining familiarity with analyzing, testing, documenting, implementation/configuration, and support of new security technologies and processes.
- Obtain working knowledge to demonstrate familiarity with risk assessment processes and tracking and remediation of issues identified in audits or assessments.
- Participate in the creation of enterprise security documents (policies, standards, baselines, guidelines, and procedures).
- Evaluate technical controls and gain familiarity with advising appropriate solutions.
- Gain familiarity with cloud-based security monitoring.
- Deliver weekly project briefing to clients and management.

EDUCATION AND EXPERIENCE

Completed or in-process undergraduate degree in the following disciplines; _ Information Technology, Cyber Security, Data Forensics, Management Information Systems and at least 1-2 years experience in a cyber related field. Certified in CompTIA A+, Net+, Security+ would be preferred.
